

SAP ABAP HANA Readiness Assessment

Many SAP customers have created tens of thousands of custom code objects over the years to meet their business requirements. Many of these objects are dormant and not used any longer. The very thought of going through piles of programs you do not know anything about is enough to send shivers down the spines of SAP customers who are contemplating migrating to suite on HANA or S/4 HANA

The project owners are not sure about how to budget for a task which does not have clear scope and may run indefinitely. Their primary challenge is to set a boundary around and limit the scope without impacting migration outcomes.

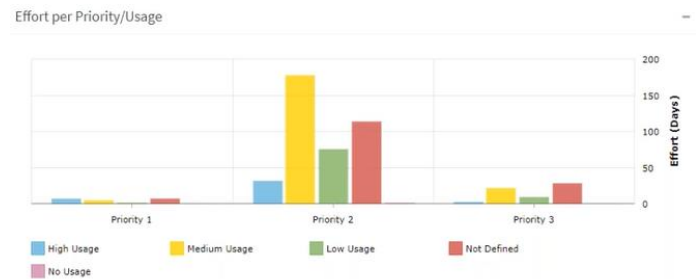

PrideVel's HANA readiness assessment service for ABAP helps SAP customers overcome this problem. It leverages the Gekkobrain HANA-readiness tool to assess your ABAP objects for HANA readiness.

At the end of the two-step assessment process, PrideVel will tell you precisely what objects require change, the required changes, and the effort involved in making the changes. It will also prioritize changes for you enabling you to focus on high priority issues first and choose to defer low priority issues until after migration. When you embark on your journey to HANA, Gekkobrain's add-on component Codefixer will automatically fix up to 90% of priority 1 and 2 issues.

The assessment report also highlights the code that has not been used in a long time. You may decide to decommission this code. This will result in saving

effort in adapting unused code and maintaining it for no reason.

Business Benefits

- Greatly improve success rate of HANA migration project by precisely knowing the custom code adaption effort beforehand
- Reduce code conversion time from months to weeks or even days
- Save ongoing maintenance effort by decommissioning unused code
- Save hundreds of thousands of dollars by automating mandatory code conversion
- Efficiently manage conversion project by using the integrated project management tool

Fact sheet	
Price	\$3600
Duration	1 Week
Deliverable	<ul style="list-style-type: none"> • Prioritized issues based on program usage • List of unused programs • Efforts required to adapt the code • List of changes required in code
System	Cloud hosted
